WELCOME TO THE 16TH ANNUAL MODEL RAILWAY EXHIBITION

12TH & 13TH JULY 2014 STAWELL VICTORIA

1. Powerline Display & Trainworld Australia's largest pure railway shop
1/624 Hawthorne Road, East Brighton, 3187. Ph.03 95968123, Mobile 0419 362199. Trainworld carries everything you need to create a virtual railway world and more. Everything for the Australian, American and British modeler including locomotives, rolling stock, kits, track, buildings, scenic material, accessories, tools, paints etc., books and dvd -videos. As well a place to get those rare hard to get items, new or second hand. email; trainworld@trainworld.com.au
Powerline Display– A display of available models and parts from your favorite hobby supplier.

2. Black & White from Sunshine MRC Inc. HO Scale
Set in World War 2, this is the German section of a large layout being redeveloped by some of the Sunshine Model Railway Club Members. The layout is based on an old black and white news reel of the second world war in Europe between 1939...1945. the display is of the second German section, it has 45 tanks ,numerous trucks and figures,4 aircraft, 2 v bombs, big bertha, plus many mini scenes of the war in progress the layout was last shown in 2004, and has been in storage since then it also comprises an allied section, currently under restoration, for future display. The operators will gladly answer any questions. The layout will be on display, at various venues, through 2014/15, at which time the war will end and the layout will disappear forever. Sponsored by village hobbies

3. Australian Aviation & Railway Photography – Raymond Rowe Ph 03 9744 7008 mobile 0407 727 277 email; aarp@aarp.com.au

4. Kleine Zillerbahnby Peter Foden from Phillip Island District MRC HOe scale
Based on the Zillertahlbahn in the Austrian Tyrol, this little layout features computer control of the mainline operations and sound effects. The period is around 1900, a time of change. The steam locomotive is well developed, but the horse is still king of the road.
They are arc welding in the workshop- but the sawmill is still powered by a water wheel
And the drink of choice is Beer, not Red Bull

5. Airport Models
Ph03 9324 3841 mobile 0418 179729 Email; Kevin@apwmodels.com.au

6. Little River Logging Company by Allan Beaumont On 30 Scale
Allan has taken off in a new direction with this new layout. The building of this layout is largely my wife's fault (Thanks Love).She bought me a Rogers 2-6-0 so I had to expand from there, after collecting a couple of locos I decided to have a go at a trestle bridge. Well there I was with a bridge and new locos and nowhere to run them, the only solution was to build a new layout, the result is here today! The layout and logging company take their name from the small river flowing under the bridge, the only way into the logging site is by train, horse or walking, train being the preferred option, as this happens once a week your timing is important. Fortunately you have timed your departure well, so sit back and enjoy the view along the Little River Logging railway
Alan is also demonstrating 3D printing at his stand.

7. MC Models
This is the opportunity for you to purchase that hard to find item for your collection, or a really good bargain at a second hand price whether it be a loco, wagon or accessory item. Christine Bodinar mobile 0412 096 832 Ph 03 9795 3646 Fax 03 9701 1068
Email martin@mcmodelrailways.com

8. Cobb's Landing by Tony Auden G1 Scale
A gauge 1 layout modeling a possible American Logging Camp during the late 40's period. A McGriffert log loader lifts logs onto flat cars, which are then taken by a Forney steam loco and unloaded via a large wooden beam suspended diagonally across the rail tracks just above the flat cars.
Kid Drive across front of layout- please ask for a turn

9. Goppingen & Durnau, Railway Stations – by David Pettifor Z Scale
'A case for small trains'. Z gauge trains are just 1/4" between the rails, or 6.25mm in the new talk. This layout was designed like a tennis table, it folds in half along the wall. When opened the connecting rails must be aligned perfectly or the small wheels will derail = ask for an explanation. All trains and most buildings are by Marklin and Goppingen. The totally different sides of the wall are not by accident, this is how the two halves live…. Working class and others. Observe the children on the crossing, and the traction engine show.

10. Model Competition Room – See some great works of craft from model enthusiasts!

11. Ray's Redeemed Railway a collection by Ray Elderidge a member of GV Rail & MRCAA inc. O Gauge Tinplate 1:43.5 scale
The layout consists of 2 electric and 1 clockwork ovals. Tin Plate wayside buildings etc., are used thought. The trains are representative rather than models. This was normal for the period 1901-1965, which is the age of rolling stock etc.
The intention is that one track will run Hornby, Louis Marx & others, one track will run Australian made trains such as Ferris, Maurlyn, Robilt etc. These trains are built with AC mech's ranging from 6V to 16/18V systems. Ray is happy to talk about Granddad's toy trains.

12. Historic Trains – By Bill Redfern O Scale
A collection of historic model trains, including Ace and Hornby.
examples

13. Kerroby Models Ph 02 46819917 email kerrobyshows1@outlook.com
Kerroby Models is a family business, owned and run by Kerin & Robert Rawlins. They have manufactured their own Masters, moulds and castings since 1986. All animals are basic hand painted and ready to go on your layout, or you can super detail yourself. Products made include N, HO & O Scale, see our range on display. We supply to all good hobby shops, or we mail order if so desired. Please ask for our price list or write to us at PO. Box 31, Picton, NSW., 2571.

14. Model spacecraft – by Greg Cameron of Stawell - various scales

15. Grampians Railway, by Ken Davies from GMR Inc. HO Scale
This simple layout shows what can be done to give lots of fun as a starter layout.
A John Deere collection plus Trucks & Cars, a collection by Ken Davies from GMR Inc.

16. Kangaroo & Cockatoo Railway by Rev.Dr. Vern Cracknell G gauge 1:22.5
The setting is Australia's high country. A timber company has its own railway to connect its small towns and logging operations. They have named their railway the Kangaroo and Cockatoo Railway. Some of the company's locomotives and rolling stock have been imported from overseas, whilst others have been built by themselves. The layout is in G scale, proportion 1:22.5 , and modeling narrow gauge. It portrays aspects of the timber industry with its logging trains, its township and locomotive yard. Trains also travel past Cockatoo Siding, where the setting is agricultural. There are many stories for the observer to interpret among the scenes. Captions will suggest some clues to these cameos of life. There are animals to find (ask for a "find it" slip to aid you in your search), and over 100 hand made human figures, and many reflections of life in the 1930s. Take note also of the displays and information boards. The observer will see a range of trains - passenger, pay truck, hand-car, logging trains of different types, and at times locomotives, such as a Climax or a KI Garratt, and the intriguing Coffee Pot. A working Shay can be seen as part of the display. Listen, too, for the sounds of the blacksmith or the sawmill, and you will notice other sounds too. Although the Kangaroo and Cockatoo Railway is fictitious, it nevertheless attempts to portray the era of the 1930s in Australia and the practices of narrow gauge company workings.
Please give yourself time to explore the details for your pleasure, and the operators will be happy to answer your questions

17.VR Casts By David Shalders

18. Lyndons Trains
mobile 0413 315976 Email sales@lyndonstrains.com

19. Pendletown by Rob & Heather Pendleton HO Scale
This is a freelance layout in HO with a double track mainline and sidings. Plenty of shunting to be done, interchangeable facilities ranging from silo's, cattle yard, general freight to repair yard. This layout was built as a family effort by Mum Dad and the two boys.

20. Circus comes to Town by train by Mario & Maria Faria On30 Gauge
Mario Faria presents the circus world in miniature 1:50 scale, when circus traveled by train across Australia, Europe and the USA. I hope that my collection can bring some fine memories to the grown ups with some interest and pleasure to the younger ones.

21 The Art Of The Diorama by Laurie Green, John Hunter & Grant McAdam
Dioramas and mini layouts are a great way to build and display models, especially structures, as stand alone displays or before they are added to a layout. They are an excellent way to try out new modeling, scenery and scratch building techniques, in a very focused and inexpensive way. On display here are some ¼" to the foot scale structures, dioramas and hand painted figures. We look forward to explaining the many and varied techniques that are used to design and build these layouts.
Laurie has an On30 layout, Grizzly Flats, on Display as well.

22. O-zzie Modelling with Dan Pickard O Scale,1:48
Dan has a passion for modeling scenery and on display is a guide to how he builds the Gum Trees he features in many of his Australian themed dioramas and layouts. Also on display some of the current projects Dan is working on. Please feal free to ask questions.
Dan is also joined by Geoff Briggs who models in O-14.

23. Hump Shunt by Robert Partington OO Scale
This exhibit was designed and built as an exhibition layout to demonstrate the principals of Hump shunting and is not a "real" yard. The control system uses Digital Command Control (DCC) and CTI-ELECTRONICS hardware and software. The overall theme is "generic1950's British" and we run equipment, which is commercially available. The warehouse is scratch built and some other buildings were made from plastic & card kits.The trees were made from gap filler and twisted wire, landscaping; air conditioning filter stiffened with white glue, layered over foam and finished with sawdust and/or foam.

25. The Ideal Railway by Tony Brown and Ian TT Gauge
TT is a fairly rare model railway prototype in Australia. The track gauge is 12mm and fits between H & Ho Scales. What you see is an attempt to make a credible Australian outline railway in TT (table top). The models are kit bashed from old Triang; BTTB; Rokal and HP products material. There is no set location of the layout although we have tried to base it around South Australian type background. The rolling stock while being based on the late 50's to early 80's is from no set operator in Australia. We stress that each model is not a scale replica as may be seen on other layouts around us. Lenz DCC is the operating system. There is a mixture of sound & non sound locomotives. The signals work from Infra-red sensors which plays an important part in the operation of the layout. We hope you enjoy this layout and feel free to ask questions about what you see.

26. End of the Line Hobbies – Paul Collins & Rodney Beauchamp ph.08 85527900
We carry a full range of model railway. Steam & diesel loco's(many with sound), wagons & coaches. Track & points, roadbed, point motors & switches, track gauges & ballast. Also train sets, building & lineside structures, signals, lights & scenery. Supply DCC systems and decoders including fitting service and most train supplies and accessories.

29. Laidlaw/ Rosella by Victorian N Scale Collective N Scale
This is a modular layout built and displayed together by members of Victorian N Scale Collective to create a small or large layout as required.

30. Spessart a Marklin layout built by Lutz Heerde Ho Scale
A small fictional Village based in the Spessart region of Southern Germany, running all sorts of steam & diesel powered trains including express rail cars of German stock of era
1930- 2000. This double line Marklin 16V A.C.(3rail) C track system can be run either on analogue or digital control system and associated controllers. Buildings & features are all from commercially available stock, partly modified and scratch built, designed, constructed and operated by Lutz.

31. The Enchanted Wood by Janine & Robert Partington
This is a whimsical exhibit for the children and the 'young at heart'. This layout depicts Christmas in the 'Enchanted Wood', where the forest animals gather with excitement to see Father Christmas and the magical Christmas Tree, shop at the Christmas fair, catch up with the woodland Gossip and let the children play or take a ride on the Lego train. The scene was inspired by the magical woodland scenes in Shirley Barbers story books. The woodland animals are from the 'Sylvanian Families' range of products. We had a lot of fun bringing the idea to fruition and hope you enjoy viewing 'The Enchanted Wood' as we enjoyed making it.

32. Orrible Hills built by Ken Hughes rescued by Macedon RMRC. On30 scale
Orrible Hills represents a small tramway somewhere in the bush. The layout was built by the Horrible One, (Ken Hughes) and he was going to throw it out. It has been modified and scenic , changed to DCC and is now back to full operation.

email; bgm@connexus.net.au

34. Phil Badger & Peter McDonald Model Building.

35. Alida's Farm Diorama – by Ron Wrigglesworth On16.5 Scale
The diorama is a modular section of an On16.5 layout build to the standards of the Croydon Narrow Gauge Group. The layout was converted to a static diorama in early 2014 and fitted with built in lighting and a fascia. The farm house was scrath built model of a miners cottage in Graham Street Wonthaggi. The model cars have a family significance; my fathers own black Ford V8 Pilot and his father owned a biscuit coloured Ford V8 Pilot.

36. Cockroach Valley by Kevin Bush HO Scale
Cockroach Valley was first started in 1973 in Coburg Victoria and over the years has had many moves. This is the exhibition part of our large home layout. It is freelance design somewhere in Australia. We have used code 83 rail and it is powered by a NCE digital system. We run Victorian, South Australian and New South Wales rolling stock. The layout has steel framework and is currently under construction.

37. Harpindone by Michael Lynch OO Scale
Is a freelance DC-OO scale layout on which I run both old and new trains from my collection. Old trains were manufactured by Triang, Mainline, Hornby Dublo, Lima and Wrenn making up trains hauled by steam and early diesels. New trains include Hornby's modern Eurostar, HST's and Loadhaul diesels with container wagons and one hundred ton oil tanks. The Layout name of HARPINDONE is based on the general area on where I spent my childhood and is derived from the town of HARPENDEN and the surrounding towns and villages of HEMEL HEMPSTEAD and REDBOURN.

39 .New Ashbyrne -by Macedon Ranges Model Railway Club Inc. On30 Scale
The previous town of Ashbyrne suffered from the usual Victorian bushfires. New Ashbyrne has risen from what was left. A little bigger and a variation to what it used to be. Forturnately the timber mill survived and the town was lucky to have timber available to rebuild. This layout now operates on DCC. We make our own trees and scenery materials. Any questions or enquiries please ask

40. Eyarth by Gordon Brown 00 Scale
This layout is based on the real Eyarth Station, on the Denbigh, Ruthin & Corwen Railway in North Wales UK. It was built by Gordon Brown, a member of the British Modellers of Australia. Eyarth Station opened in 1864 and closed in the early 1960's. It was operated by steam locomotives throughout but Gordon is too young to remember steam and grew up watching diesel locomotives, mainly the British Rail Corporate Blue livery. So the layout has been built to represent how it might have looked had it survived into the diesel era of 1970- 1980's.
The layout operates using a Digitrax digital control DCC system, principally so that the operators can use the digital sound systems fitted to all locomotives. If you have any questions please feel free to ask one of the operators. We love to chat about trains!

41. Glyn Halt by Allan Ogden O-16.5, 7mm Scale
This layout was inspired by the Little Trains of Britain. It was built to a scale of 7mm on 16.5mm track(O/16.5) which is hand laid. Most of the locos and rolling stock is scratch built. Most of the scenery is from natural materials. I hope you enjoy it.

42.Shannon's Insurance - local agent Mal Pitcher ph 0418 800708
